

Want to avoid this?

Then you need this!

The Aquios full house water softener and filtration system will effectively inhibit the buildup of scale and corrosion on your water heater and other plumbing fixtures ensuring that you don't have to replace them before their time.

How do we do it? We use a specially formulated polyphosphate that sequesters the minerals found in hard water and keeps them from attaching to your fixtures, pipes or appliances. In addition, over time, the Aquios system will slowly remove existing scale. All of this without the burden of salt bags, programming and the environmental impact.

Now you can have peace of mind knowing that you won't be replacing your expensive appliances before they should and enjoying the healthy benefits of clean, soft water.
